

Exercise 1: Box Shadow Challenge

Create a CSS box shadow effect on a user profile card.

1. **Create a user profile card:** Include a placeholder for an image (use any sample image), a user name, and a short bio.
2. **Apply a box shadow:** Give your card a shadow that makes it look slightly raised above the page.
3. **Experiment with hover effect:** When hovering over the card, make the shadow more pronounced, giving the impression the card is lifting.

Hint: Look into CSS `box-shadow` property and `:hover` pseudo-class.

Exercise 2: Text Shadow and Icons

Enhance buttons with text shadow and FontAwesome icons.

1. **Create buttons:** Make three buttons labeled "Join Now", "Discover", and "Contact".
2. **Apply text shadow:** Add a shadow to the text of your buttons to make them pop.
3. **Add FontAwesome icons:** Insert an appropriate icon before the text on each button. (Make sure FontAwesome is linked in your HTML)

Hint: Explore `text-shadow` CSS property and how to use FontAwesome icons.
