

CSS Variables Exercise: Switchable Theme Profile Card

Goal: Create a profile card that can switch between light and dark themes using CSS variables. Your card will display a person's photo, name, job title, and bio.

Task:

- Design a profile card with semantic HTML.
- Use CSS variables for easy theme switching.
- Include elements for a profile photo, name, job title, and bio.
- Make a button to switch between themes
 - use this button snippet in your HTML file

```
<button onclick="document.body.classList.toggle('dark-theme')">Toggle Theme</button>` ``
```

Hints:

- Define CSS variables for colors and fonts at the root level.
- Create classes for light and dark themes that change these variables.
- Apply the themes to see the effect of CSS variables.

Outcome:

- A profile card that showcases the power of CSS variables for theme management.
