Basic JavaScript Exercises

String concatenation Exercises

In the following exercises declare all your variables with `const` unless you are told otherwise

1. **Introduce Yourself** Create two variables: one for your name and one for your age. Use string concatenation to print a sentence like "My name is John and I am 25 years old."

2. **Favorite Things** Create variables for your favorite color, movie, and food. Use string concatenation to form a sentence like "My favorite color is blue, I love the movie 'Inception', and I enjoy eating pizza."

3. **Simple Math** Create two numeric variables, `a` and `b`. Use string concatenation to print a sentence that says "The sum of a and b is [result]" where `[result]` is the sum of `a` and `b`.

4. **Day of the Week** Create a variable that holds the current day of the week as a string (e.g., "Monday"). Use string concatenation to print "Today is [day]", replacing `[day]` with the value of the variable.
