Exercise 1: Design a Greeting Card

Objective: Create a digital greeting card that is centered on the webpage. The card will contain a greeting message and a personal note within an `<article>` element.

Instructions:

- Write an `<article>` element with a class of "greeting-card".
- Inside the `<article>`, include a `<header>` with a greeting such as "Happy Birthday!" and a `<p>` tag for a personal message.
- Use CSS to style the greeting card. It should have a white background, a solid border, and shadow for depth. Ensure the card has internal space around the text and is centered on the page.

Exercise 2: Assemble a Horizontal Navigation Bar

Objective: Construct a horizontal navigation bar at the top of the webpage using a `<nav>` element. The navigation bar should contain links for Home, About, Services, and Contact.

Instructions:

- Utilize a `<nav>` element with a `<ul>` list for the navigation items.
- Each navigation item should be in an `<li>` that contains an `<a>` tag.
- Style the navigation bar so that the list items are displayed horizontally and have padding for clickable area expansion. The navigation links should have a distinct background color that changes when hovered over.

Exercise 3: Frame a Favorite Quote

Objective: Present a favorite quote within a `<blockquote>` element on the webpage. The quote should appear as if it's inside a frame, centered on the page.

Instructions:

- Place your favorite quote inside a `<blockquote>` and credit the author using a `<cite>` tag.
- Apply CSS to give the `<blockquote>` a border, making it resemble a picture frame. Include padding to create space between the quote and the frame.

- The quote should be centrally positioned on the page with a background color that contrasts with the page background to make it stand out.
